

SARTAJ QAMAR

Senior Android / Mobile Software Engineer

Rawalpindi, Pakistan | +92 336 220 3156 | sartajqamar111@gmail.com | [linkedin.com/in/sartaj-qamar](https://www.linkedin.com/in/sartaj-qamar) | sartaj-qamar.vercel.app

PROFESSIONAL SUMMARY

Results-driven Android Developer with 2+ years of hands-on experience architecting, developing, and shipping high-performance mobile applications using **Kotlin** and modern Android frameworks. Currently building a healthcare Companion App at **CareCloud**, integrating **Cirrus AI** to generate real-time clinical notes from patient–doctor conversations — directly aligned with HIPAA-compliant, AI-driven healthcare mobile development. Deep expertise in **MVVM / Clean Architecture**, **Jetpack Compose**, **Coroutines**, secure data handling, and RESTful API integration. Proven track record delivering reliable, scalable apps with a strong focus on performance, accessibility (WCAG/TalkBack), and security. Experienced in CI/CD, automated testing, and Agile workflows.

CORE TECHNICAL SKILLS

Languages	Kotlin (primary), Java	Architecture	MVVM, Clean Architecture, Repository Pattern
UI Frameworks	Jetpack Compose, XML Layouts, Material Design 3	Concurrency	Coroutines, Flow, WorkManager, Services
Data & Storage	Room DB, SQLite, Shared Preferences, Android Keystore	Networking	Retrofit, OkHttp, RESTful APIs, JSON parsing
Cloud / Backend	Firebase (Auth, Firestore, FCM), AWS basics, Azure basics	Testing	JUnit, Espresso, UI Automator, Mockito
CI/CD & Tooling	Git, GitHub, Fastlane, Play Store deployment	AI-Assisted Dev	GitHub Copilot, CursorAI
Security	Encryption at rest/transit, certificate pinning, secure key mgmt	Accessibility	TalkBack, WCAG guidelines, inclusive design
Project Tools	JIRA, Confluence, Agile / Scrum	Profiling	Android Studio Profiler (CPU, Memory, Network)

PROFESSIONAL EXPERIENCE

Android Developer <i>CareCloud · Islamabad, Pakistan</i>	Jan 2026 – Present
- Building a Companion App for healthcare providers — a real-time communication platform enabling seamless patient–doctor conversations within a HIPAA-compliant Android environment. - Implementing Cirrus AI Notes integration: automatically generating structured clinical notes from patient–doctor conversations using AI, enabling doctors to capture and review every key patient detail efficiently. - Designing secure audio/conversation pipelines with end-to-end encryption, certificate pinning, and Android Keystore for sensitive patient data in compliance with HIPAA and WCAG standards. - Architecting the app using MVVM / Clean Architecture with Jetpack Compose, Coroutines, and Flow for a fully reactive, accessible UI across diverse device form factors. - Collaborating cross-functionally with Product, Design, and Backend teams to deliver AI-driven clinical features from concept through QA to production release.	

Android App Developer

MileTap · Karachi, Pakistan

Apr 2025 – Nov 2025

- Architected and developed high-quality Android applications in Kotlin with Jetpack Compose, targeting scalability and Clean Architecture principles.
- Implemented MVVM with Repository pattern, leveraging Coroutines & Flow for fully reactive, non-blocking UI behaviour.
- Integrated RESTful APIs via Retrofit/OkHttp and managed local persistence with Room DB and Shared Preferences.
- Collaborated with designers and backend engineers to deliver polished, user-focused experiences aligned with product specifications.
- Utilised GitHub Copilot / CursorAI to accelerate feature development, refactoring, and inline documentation.

Freelance Android Developer

Self-Employed · Remote

Nov 2024 – Apr 2025

- Designed and delivered end-to-end Android solutions for multiple clients, owning the full lifecycle from requirement gathering to Play Store release.
- Built diverse applications (AI Story Generator, Speech-to-Text, Passport Photo Editor) demonstrating breadth across media, on-device ML, and system APIs.
- Applied performance profiling tools to resolve memory leaks and reduce ANRs, improving crash-free rate significantly.
- Maintained clean Git workflows with branching strategies (Git Flow) and delivered projects within agreed sprint timelines.

Android Developer

NineSol Technologies · Islamabad, Pakistan

Nov 2023 – Nov 2024

- Developed and maintained production Android apps in Kotlin using MVVM architecture and modern Android Jetpack libraries.
- Integrated JSON-based REST APIs and handled edge-case error management to ensure reliable data flow across unstable network conditions.
- Implemented Room Database and Shared Preferences for offline-first data strategies, improving app usability in low-connectivity scenarios.
- Conducted extensive device and OS version testing, collaborating with QA to reduce crash rates and improve app store ratings.
- Contributed to multiple published Play Store apps, ensuring consistent adherence to Google's quality and policy guidelines.

KEY PROJECTS

Workwise App	Enterprise productivity app — implemented MVVM + Room + Retrofit stack; built offline sync with background WorkManager jobs.
AI Story Generator	On-device ML integration for AI-driven narrative content; optimised inference pipeline for low-latency responses on mid-range devices.
Speech-to-Text App	Real-time audio processing using Android SpeechRecognizer API with custom UI for accessibility compliance (TalkBack-compatible).
Passport Photo Editor	Image processing and cropping tool with multi-resolution export; profiled and resolved memory pressure issues on entry-level devices.
Auto-Connect Bluetooth	Background service managing BLE device discovery and auto-pairing with persistent foreground notification and battery optimisations.
Resuming App	Template-driven PDF resume builder with dynamic data binding, demonstrating PDF generation and complex RecyclerView layouts.

Bachelor of Science in Computer Science

University of Azad Jammu and Kashmir · Pakistan

2016 – 2020
